# Mobile App & Backend Priority 1

S/N	Slide	1 <sup>st</sup> Reported	Mobile App	Backend Corresponding
1	21-23	Org Requirement	Each listing can have either Outlets and/or Ad-Hoc GPS Locations. When listed, it should show all locations but show & ranged with the nearest. User can tap on location to see where it is on map. Address should show 1. Mall Name, Address 2. GPS Location Name 21Jan15 Still not fixed	1. Already allowed to select multiple locations but website & mobile are not using. 2. Allow GPS locations to have different description for name (eg. Atrium, Ion Orchard) than to use address (2 Orchard Road Singapore 123456)
2	21-23	12 Dec	Card Program – unable to show card it is linked to listing even though defined in backend 21Jan15 Done	
3	24	25 Dec 14	Does not refresh with latest listing data. Even with refresh button or open/close app. Need to restart entire phone to refresh. Tried twice – once on listing and another on the Ads. 21Jan15 Still not fixed	
4	25	20 Nov 14	Valid date of offer is not the same as posting dates 21Jan15 Still not fixed	field for offer Valid Date (See Website Item 4)
5	26-29	Nov 14	Map- Current, not showing the actual current location as it should be. Also all the mapping issue as reported. 21Jan15 Still not fixed	
6	NA	Since start	Today's Special Alert – still cannot test. 21Jan15 Still not fixed	
7	30	12 Dec 14	To show distance when distance marker is used rather than showing only after it is used. 21Jan15 Done	
8	31	12 Dec 14	Filter not working when changed to "All" 21Jan15 Done	
9	NA	Since start	App goes into non-stop updating until phone is reset and App then opens fine. 21Jan15 Still not fixed	

# Mobile App & Backend Priority 2

S/N	Slide	1 <sup>st</sup> Reported	Mobile App	21Jan15 Done-Pending	Backend Corresponding
1	33	Original spec	Barcode Scanner		Still need to know user ID – as discussed
2	34	16 Nov 14	Disappearing text on selection box in Profile>Location		21Jan15 Still not fixed

## Refresh Issues

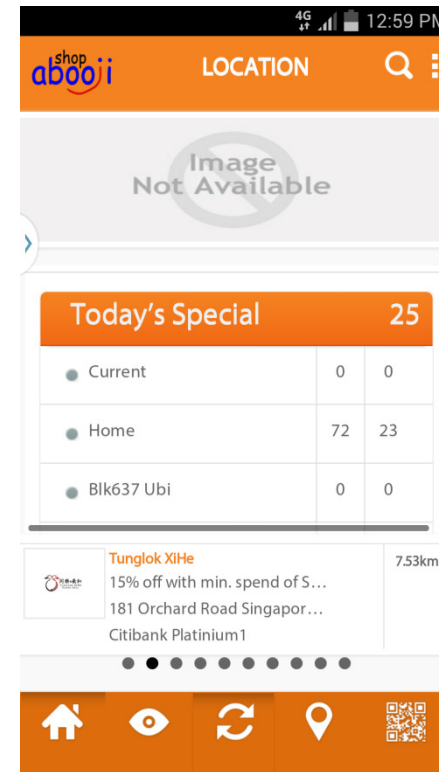

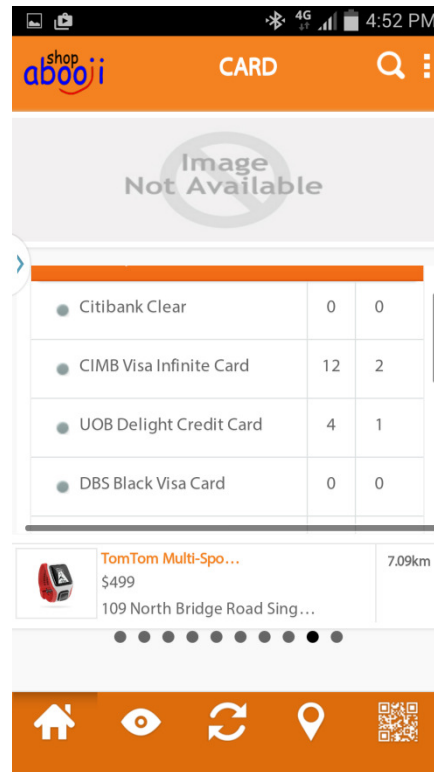

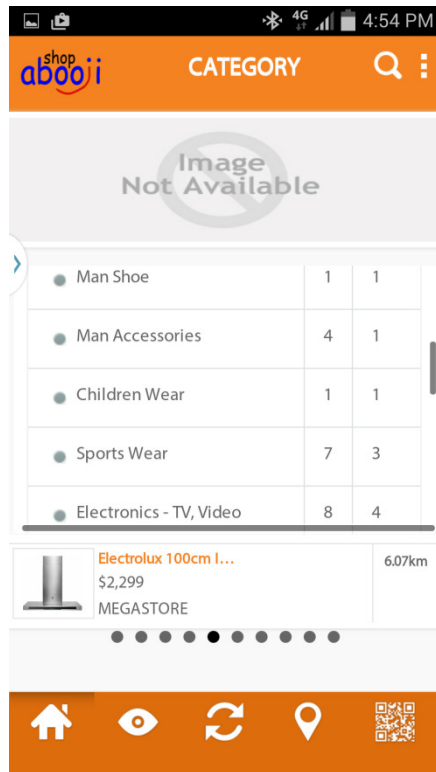

### Issue 1

- New listings do not show up in mobile app even though it already shows up in website
- Not new, reported previously
- Even after several refreshes, it does not come on.
- However, after "Force Stop" the app and then re-run, the Ad loaded.

### Issue 2

- When the profiles are changed, eg add new category or cards, not reflected in listing until refreshed several times
- Again not new, reported previously

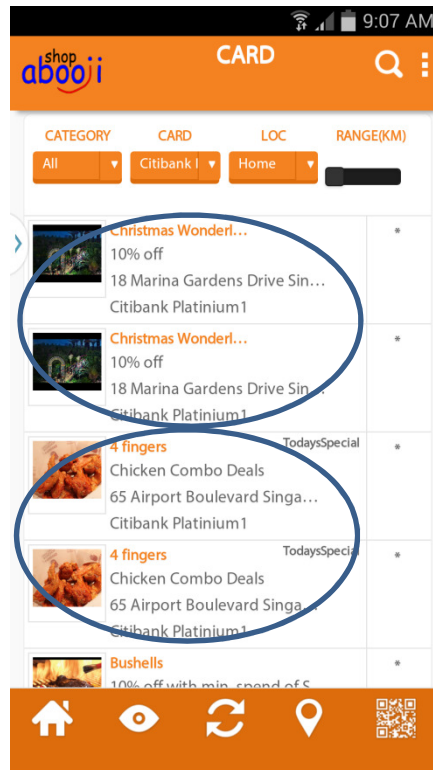

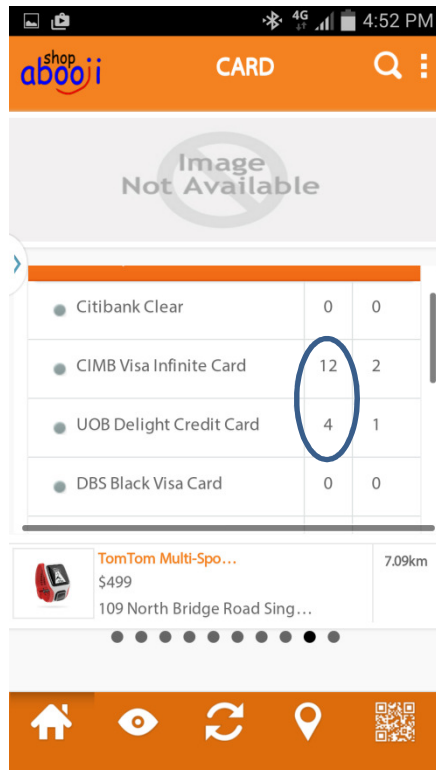

## Presentation Issues

### Issue 1

- List are not sorted in alphabetical order
- In Location, can leave Current at the top of list and the rest should also be sorted

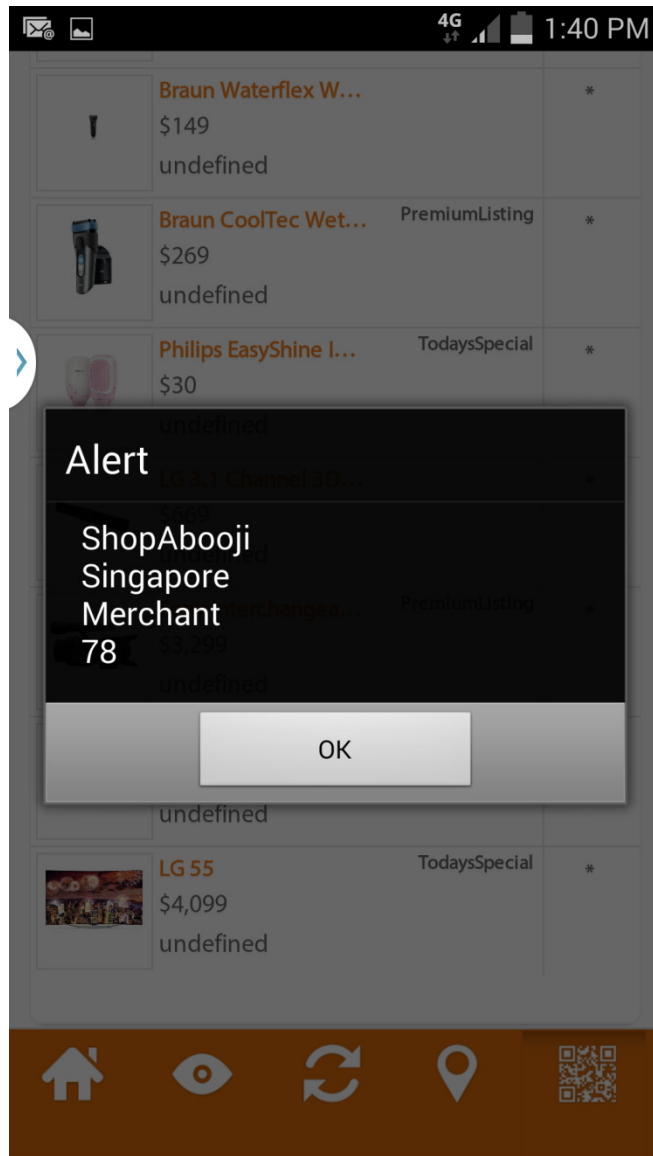

## Presentation Issues - Card

### Issue 1

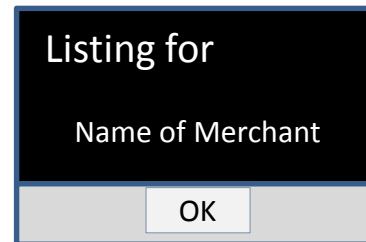

- The sorted items are always duplicated in the Card listing

## Barcode

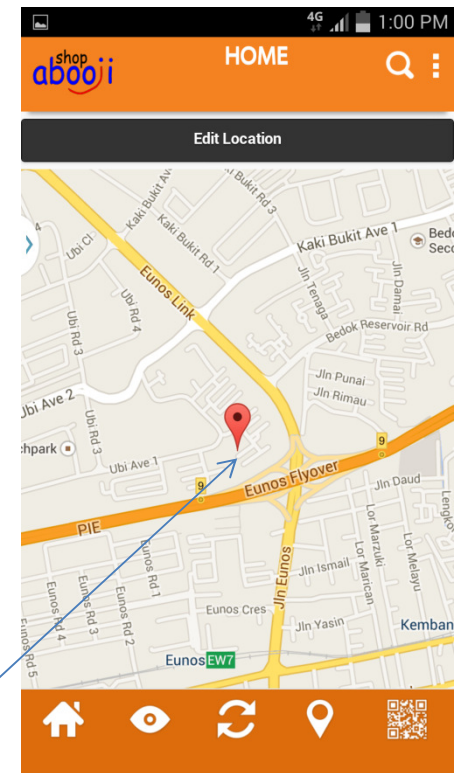

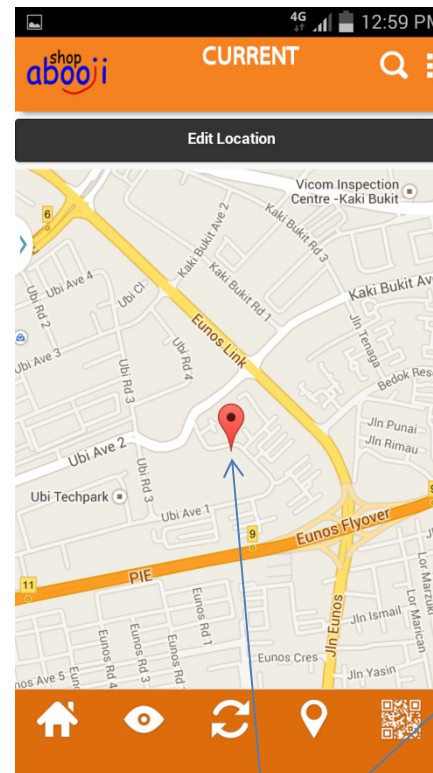

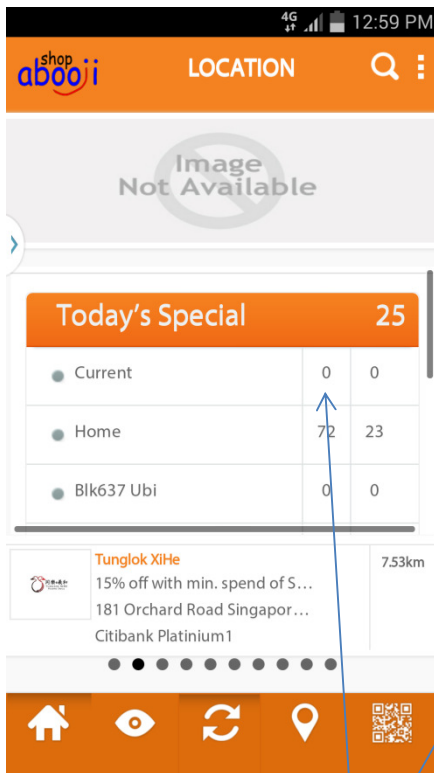

### Issue 1

- Just a result reflection
- Instead of showing as shown
- Please instead just show:

## Current Location Filter & Map Location - 1

### Issue 1

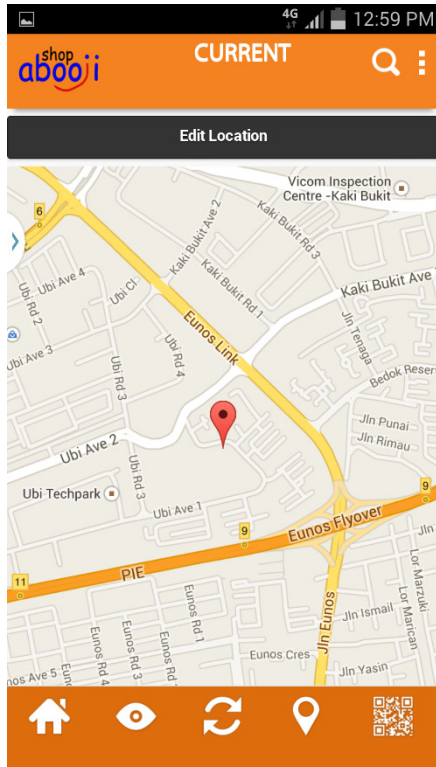

- Current shows no listing although position is the same as "Home" as verified in these two mapping positions

### Issue 2

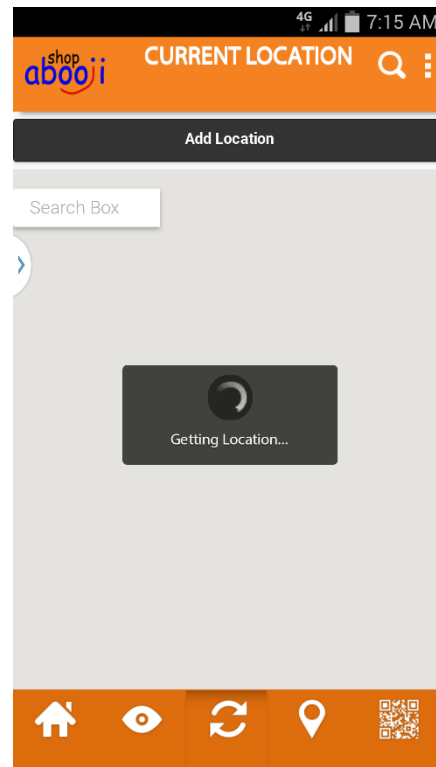

- Map does not work when used indoor even though GPS has been turned on

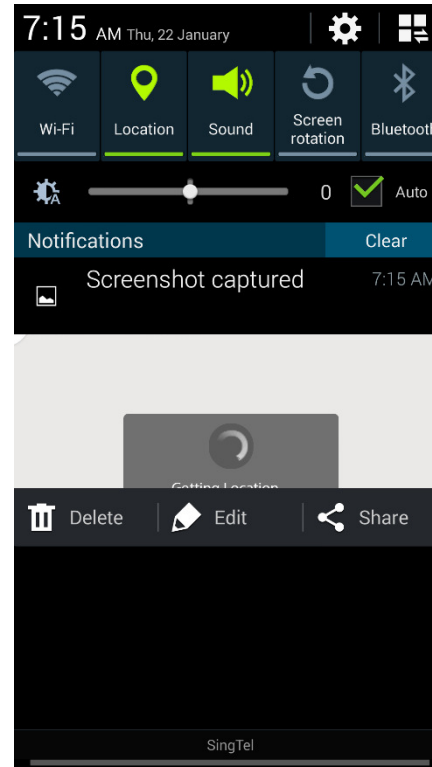

## Current Location Filter & Map Location - 2

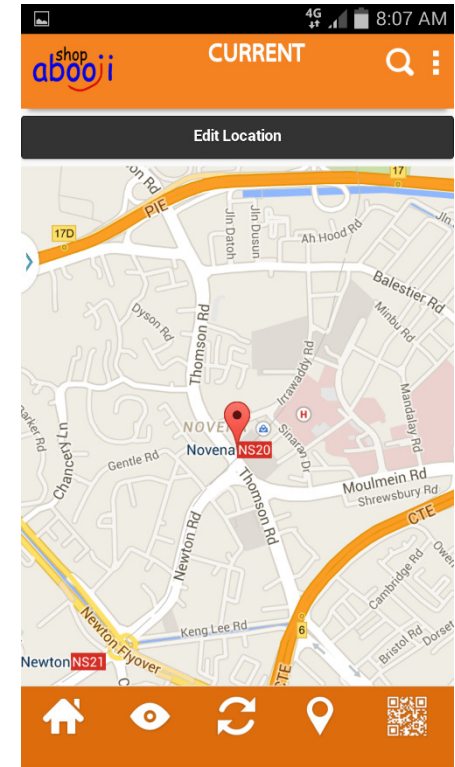

"Current" when new built was used for the first time. Shows location and map correctly.

When moved to a different location, "Current" did not update location based on new position. Noticed that GPS icon is not showing even though it was turned on. Attempt to refresh sent the app in to an update cycle. Question: could it be possible the GPS was not turned on resulting in no position information and thus no update?

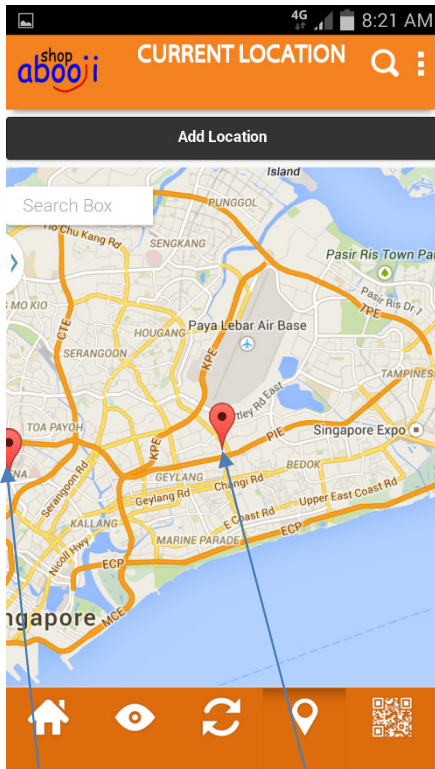

A check on the screen shows that GPS is still turned on but app is not getting GPS location as evident in the message "Getting Location"

After "Force Stop" the app and re-run, "Current" again shows the correct location. After this, regardless of change of location, "Current" does not update anymore.

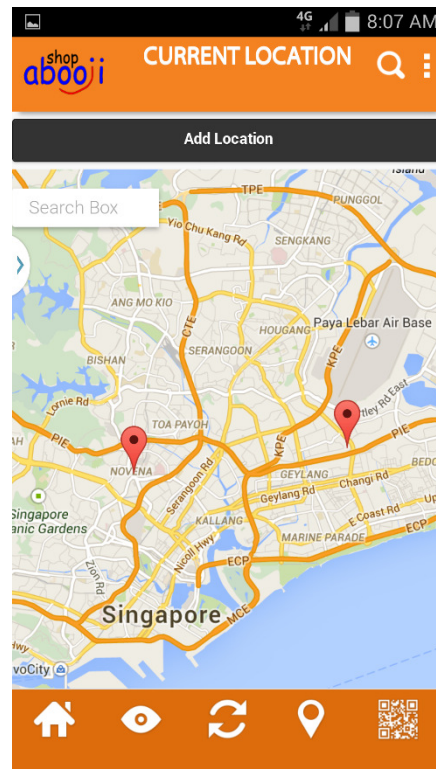

Please check again

## Current Location Filter & Map Location - 3

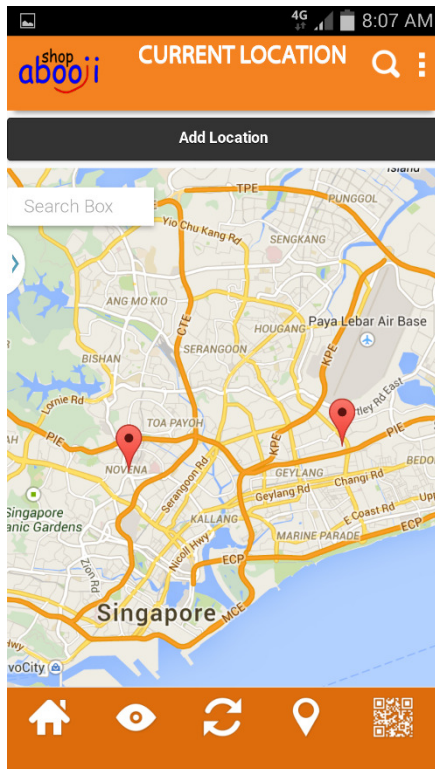

Selected  and this map shows up.

1. The wrong part of the map is displayed
2. Correct position is at
3. This was the position I last checked just before selecting

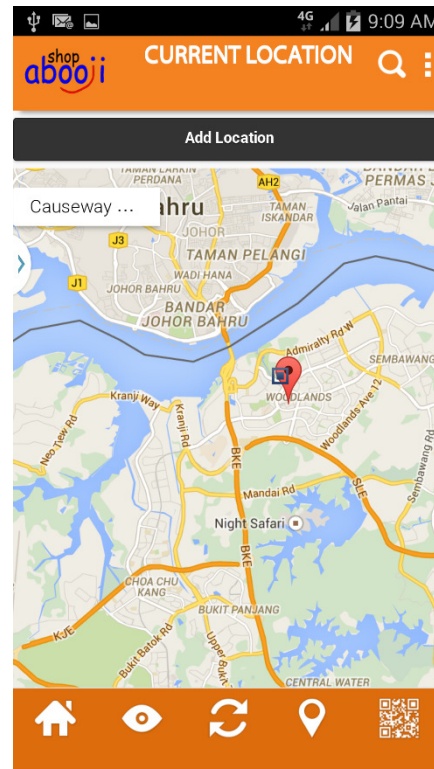

Zooming out it shows both positions which it should not!

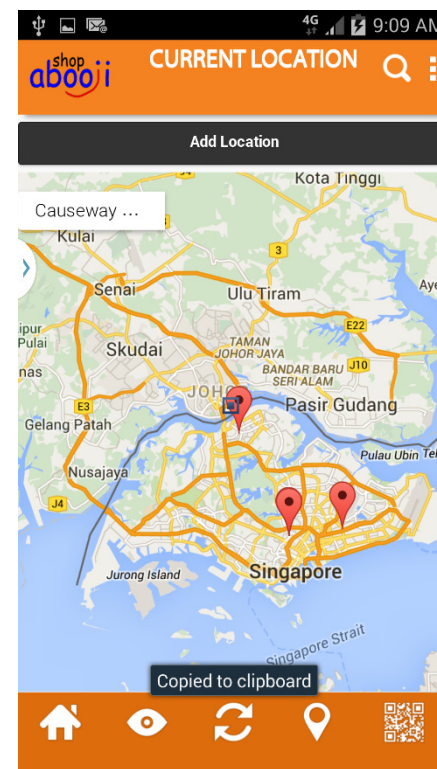

## Current Location Filter & Map Location - 4

Continue the same test from previous slide by adding a location “Causeway Point” again using 

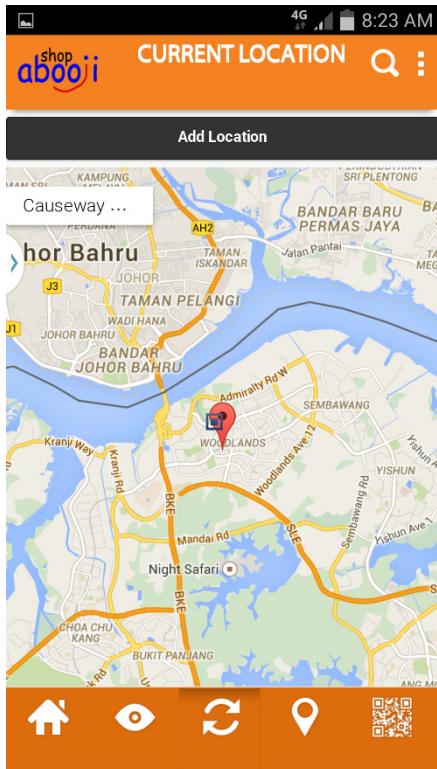

“Causeway Point” shows up correctly.

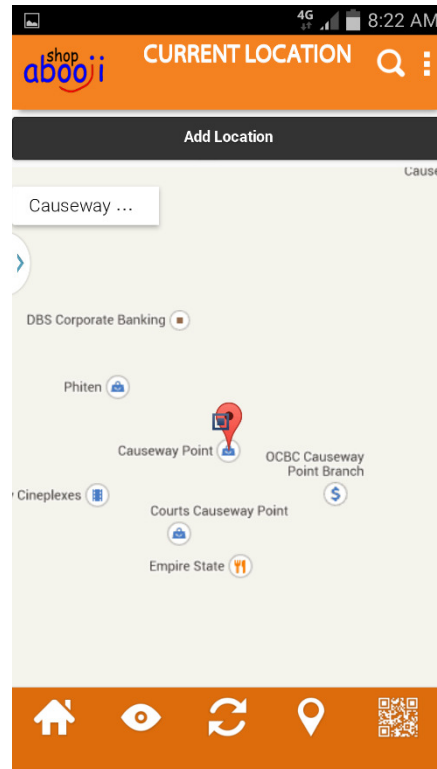

On Zooming out, again the legacy of both previous locations are still on the map

## Edit Location

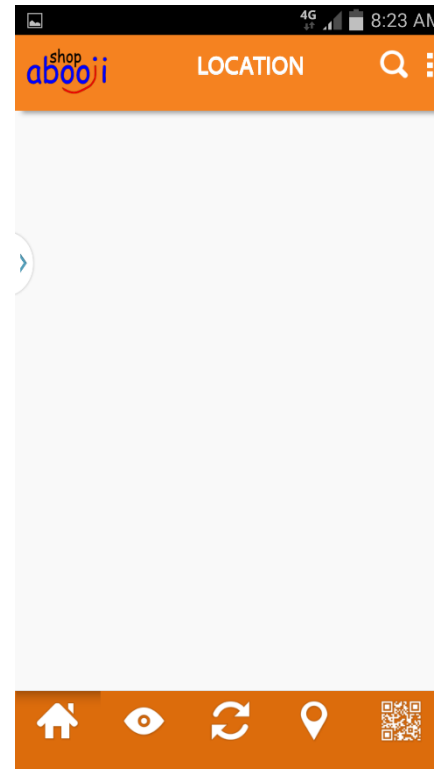

Used  to add a location  
“Causeway Point”

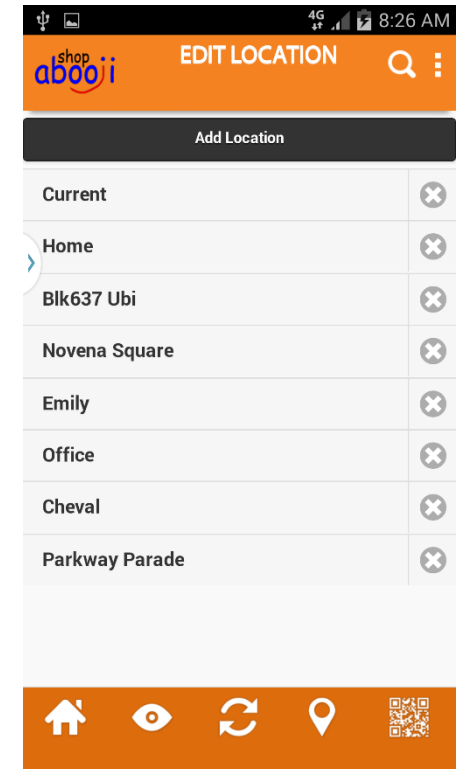

Zoomed into “Causeway Point”  
but map does not seem to work  
correctly.

Selected “Add Location” and it  
resulted in this next screen

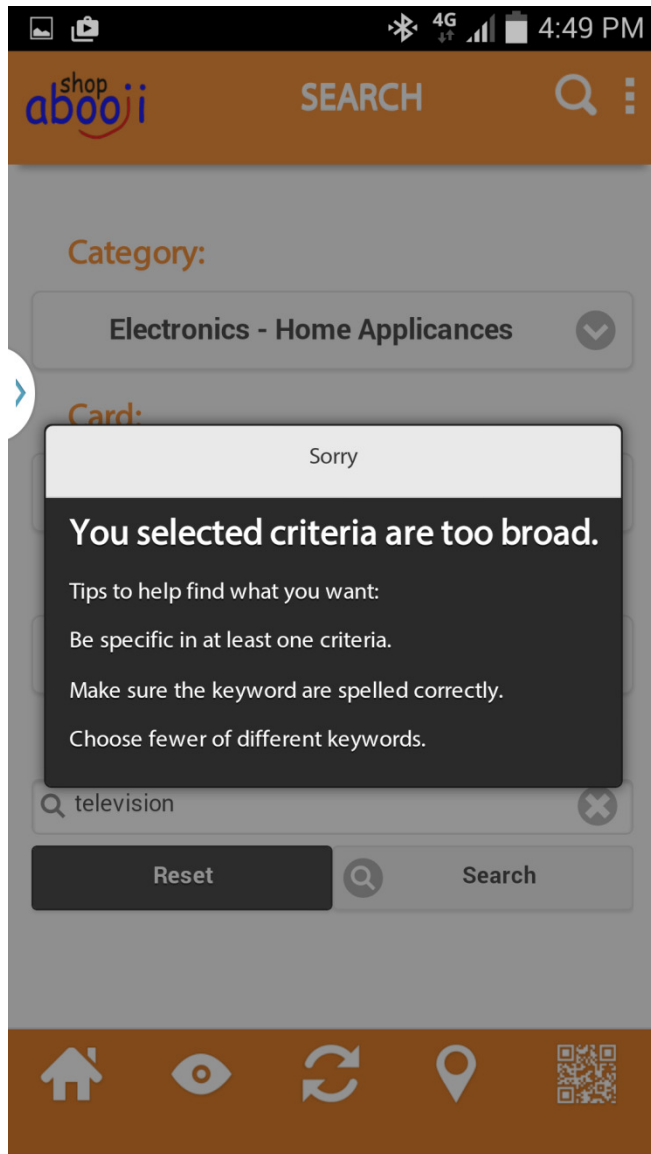

Waited for a while and the screen  
remained

Selected “Edit Location” to check  
if this location add works – Nope,  
it does not show up

# Search

## Issue 1

- Engine indicates “criteria too broad” whenever Keyword search mode is used. Please fix in accordance to website

## Issue 2

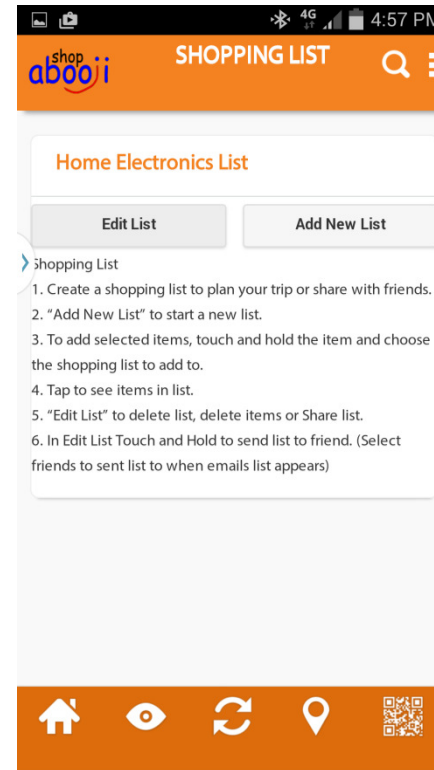

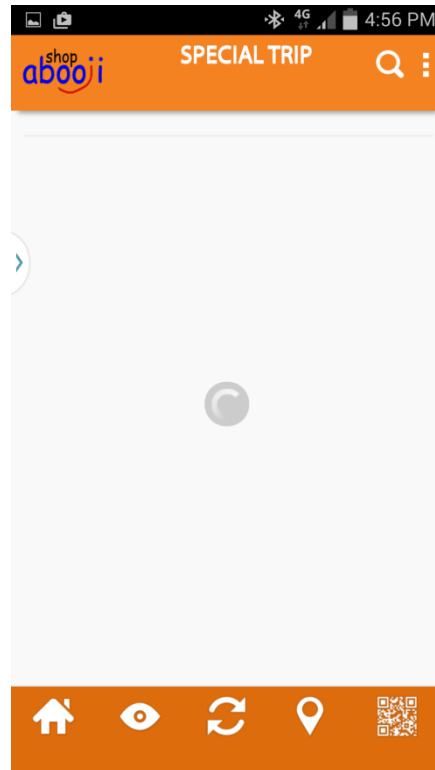

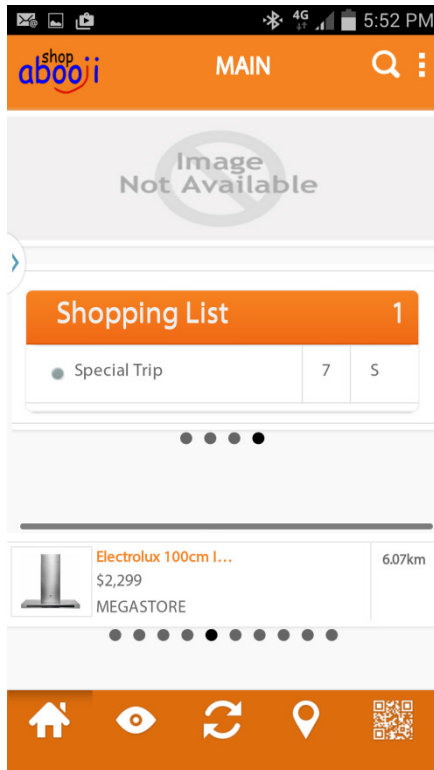

- The selected Category, Card and Location filters seems to work

## Issue 3

- However, when Location is not selected, the filtered list should always be defaulted to “Current” instead of any other location

# Shopping List

## Issue 1

- "Special Trip" was deleted but continued to show up in the Shopping List

## Issue 2

- New shopping list "Home Electronics List" as added but does not show up in Shopping List

## Issue 3

- Unable to test further this feature including sending and receiving shopping list

## Untested features

Alert for Today's Special

- Please advice when it can be tested

Add Location

- Map loading does not seem to work well (note that Google map downloaded with no issue)

Location of Merchant/Outlets

- Unable to test as yet

## New identified Issues

Cannot return to App after clicking on link in Ad/Listing

- In some situations, advertisers place a link within their listing. However after selecting this link, it does not allow me to return to the ShopAbooji mobile app.
